The screenshot shows the vDosStresser web interface. At the top, there's a logo with 'vDos Stresser' text. Below it, account information is displayed: 'Account type: Normal', 'Your boots: 34', 'Account status: Active', 'Account expires: 2 months, 30 days, 13 hours, 32 minutes', 'Account expire date: 20-02-2015 00:00', 'Account max boottime: 3000', and 'Concurrent attacks: 2'. There's also a note: 'There are 6 stressing servers. Total boots: 22729. Total users: 8672. Coolman system is currently off.' and a timestamp 'vDosStresser 20-11-2014 19:36'. The main section contains several input fields for configuring attacks: 'Boot #:' (set to 1), 'IP:' (empty), 'PORT:' (empty), 'TIME:' (empty) seconds, 'Method:' (radio buttons for SUDP, SUDP, MTP, ESSDP, ICMP, ASYN, and Joomla), 'Hide this attack from the RUNNING BOOTS PAGE:' (radio buttons for No and Yes), 'Skype resolver:' (input field for 'skype username'), 'Host To IP:' (input field for 'www.google.com'), 'Geo IP:' (input field for 'IP'), 'Ping Host:' (input field for 'IP'), and 'Cloudflare resolver:' (input field for 'www.example.com'). A red box highlights the 'Host To IP:' field. To the right, there's a hand-drawn diagram on a chalkboard background. It shows a cloud with various IP addresses: 'udp, tcp, syn', 'icmp, cc, get', 'adflyer, adflyer', 'httpoxy, httpoxy', 'adflyer, adflyer', and 'buy food'. Arrows point from these to a central point. Below the cloud, there's a red '攻擊' (Attack) label. To the right of the cloud, there's a box with '非法' (Illegal) and '主机' (Host). At the bottom, there's a note: 'Press enter for resolve or boot'.
