Note, these commands can be used on any system.
localhost> hint

X

Hint to reach level 4:

You ran the 'help' command on your localhost machine, now you need to use those commands to discover information on your own system. One of the help commands is 'ls' to list files, another is 'type' to type out or display the contents of a file. Some commands do not require any parameters, like 'help' or 'ls'. Some commands do require a parameter like 'type', so you would enter 'type filename' where filename is the name of the file you want to read.
