

The screenshot shows a Kali Linux terminal window with a network scan in progress. The scan is performed using a tool like Nmap, as indicated by the output. The target IP address is 192.168.1.100. The scan results show several open ports and the services running on them:

- Port 80: HTTP WebServer
- Port 25: SMTP MailServer
- Port 21: FTP Server
- Port 504: SSH

The terminal output also includes information about the scan progress, such as the number of hosts scanned and the time taken. The scan is completed, and the results are displayed in a structured format.
